

Take Action on Electric Hot Water

**Do you own a block of flats or apartments?
Has it got an Electric Hot Water system that
needs replacing? Maybe it doesn't need
replacing, you just want to be involved.**

Take Action on Electric Hot Water

Take Action will be trialling new hot water technologies. The trials will include Solar and Heat pumps. Other energy saving techniques will also be identified. For the household it means cheap and reliable hot water and fewer greenhouse gas emissions. The project will run for approximately 18months.

Becoming involved has the potential to save you money, add value to your property and reduce Victoria's carbon output.

Take Action on Electric Hot Water is supported by the Sustainability Fund. The Sustainability Fund is managed by Sustainability Victoria and supports projects that help Victorians to take action on Sustainability.
